# H2BC

High  
Performance  
Custom  
Built Plastic  
Strapping  
Machine

Designed to Secure Basiloid's and  
Large Corrugated Cartons

Dynaric, Inc.®

## The H2BC is a high-speed custom built strapping machine

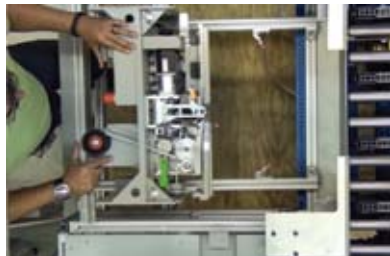

Designed to strap basiloid containers

This side seal strapping system allows the product to enter the strapping area as the sealing unit travels down or up the basiloid while securing it. This unique process allows for fast and reliable operation.

The H2BC strapping machine is built around our MHBHU strapping head.

The strapping head is designed to be completely removed and replaced within minutes, allowing for scheduled maintenance and maximum uptime.

## Height Detecting Laser

No matter what height the basiloid is the laser will detect and make adjustments to place the strap in the proper areas.

## Safety

All of our strapping machines are designed with safety in mind and the H2BC is no exception.

With sensors placed throughout the strapping machine you can operate the H2BC with confidence knowing you and your product will be safe.

## Designed Specifically for your Application

Before a H2BC can be built our engineers will sit down to determine what your requirements are so the strapping machine will do exactly what you need it to do.

## Large LCD Display

The H2BC strapping machine is equipped with a large control panel for easy functionality and control.

The large display/control panel can be customized for your specific industry. Allowing for multiple levels of security, the H2BC control panel gives basic controls to the machine operators and more advanced controls to supervisors and managers.
