

XL Dynaric, Inc. Coils

Get More High Quality Plastic Strapping - for Less!

Dynaric XL coils are produced with the same high quality non-metallic resin used in our entire line of plastic strap. What our XL coils do have that the others coils don't is the extra footage per coil. Dynaric uses prime resin material to maintain the molecular stability of the strap to be able to run consistently in High Speed equipment. Not only will the XL increase your production by preventing unnecessary downtime in-between coil changes it will also save you money. Our XL line of coils improve sustainability by reducing the use of the paper cores and corrugated packaging material therefore reducing our production cost and pass the savings on to you.

With Dynaric's XL coils you get more for less.

- **More** strapping per coil.
- **More** profit for your business.
- **Less** equipment down time changing coils.
- **Less** floor space required for storage.
- **Less** packaging to dispose of.
