H2B-PS
Retractable Lance Pallet Strapper

Dynaric, Inc.
H2B-PS

Retractable Lance Pallet Strapper

Helping our Customers Reach New Levels of Efficiency!

Although not considered a fully automated pallet strapper, the H2B-PS automated, retractable lance pallet strapping machine is considered an essential finished goods strapping machine for every automation packaging system. While manually strapping boxes on pallets can be time consuming and expensive; not to mention putting unusual stress on workers and even cause injuries, the H2B-PS provides the perfect solution with its unique automated design capable of automatically strapping cases of finished goods or products onto a pallet or skid. What makes the H2B-PS unique is the ability to run the strapping lance through the skid, secure the product and allow the product to be easily moved without strap interference. The H2B-PS fully automated pallet strapping machine is built around a heavy-duty steel frame to withstand the punishment of any environment. The Durable Construction of our equipment will streamline your packaging for many years to come.

From selecting the most appropriate automation technology to developing one-of-a-kind, custom designed strapping systems, our solution engineers and highly-trained technicians ensure customer value is optimized.
