

The Global Packaging Market is Projected to Grow 3.5% Per Year to 2020!

Food and beverage products continue to hold the largest market share of packaging.

Not only is the global packaging market effecting the packaging of the food and beverage industry it also impacts logistics and the shipping industry. As companies are experiencing the increase in production they are realizing they need reliable equipment to fulfil the demands that's why companies are relying on Dynaric, Inc. to provide them with efficient and dependable strapping equipment. Since the introduction of the N3400 fully automatic strapping machine, companies have quickly responded on how efficient and reliable this machine is as well as setting an industry standard for overall performance in turn providing quick return on investment.

What makes this strapping machine a good investment? As with all Dynaric strapping machines, the N3400A is designed for long term performance and reliability. What sets the N3400A strapping machine apart from the rest is it's built on a heavy steel frame with powder coated machine panels, inside is a precision tuned aluminum corrosion resistant strapping head with low energy servo motors. The strapping head is engineered to maximize machine life by reducing the amount of moving parts. Long-term, the N3400A strapping machine not only saves you money but it maintains reliability and machine performance.

Whether you need a strapping machine to strap rigid packaging or flexible packaging we have the equipment to exceed your demand! Contact us today to get more information on how the N3400A strapping machine will work for you!
